

OR-10 OPEN 19" RACK ASSEMBLY GUIDE

Perhaps the simplest and most cost-effective method of housing up to 10 units of 19" rackmounting equipment, the OR-10 table-top rack can be assembled in seconds and is supplied with 20 cage nuts and M6 bolts.

Note that the two 'L' shapes are handed. The right side is the one with square holes toward the *left* of the L. To assemble, remove the bolt & washer from the end of the tubular rod (a), push this rod into the larger hole (b) at the inside rear of the left L, and screw the bolt & washer (c) from the outside into the tapped threads inside the rod. Repeat for the right side.

Then snap the cage nuts into the square holes, position your rackmount units over the nuts, and screw the bolts through the front of the unit into these nuts.

See over for more MTR products, or download the MTR e-book from our website. We welcome owner/user feedback, and thanks for buying British!
